Hi Michael -

wanted to check in and see if you had had a chance to look at the monitoring information for this issue. We had promised Dr. Langford we would check on whether 1) federal reference methods were used, and 2) were there violations of a federal standard.

Also wanted to give you a little context for the request for the ozone data for Gila River. We are acting on their tribal implementation plan, and might say something different about their rules (right now they are just TIP-strengthening) if they are looking like they might be nonattainment for a 0.060-0.070 ppm standard.

I'm out tomorrow but maybe we can talk later today or Monday about this.

thanks!

Wienke

Subject: San Luis Obispo PM10 violations?

Michael & Wienke - (Wienke, Lisa said you might be able to address this.)

This is a "head's up" that you both will likely receive a call from Dr. Nell Langford (805/773-4771) about results of a recent study in San Luis Obispo that she says attributes PM10 violations to off-road vehicle travel on the beaches and dunes there. She wanted an emergency injunction under CAA section 303 to shut down the activity.

I tried to explain more about how our process works, but I thought someone from Planning should explain steps we have to go through once an area is found in violation.

I spoke with Michael about this already -- he is very familiar with an earlier phase of the study. He mentioned that the study may not have been using Federal Reference Method monitors, so the concentrations might not constitute a violation.

SLO district site has the study:

<http://www.slocleanair.org/>

Dr. Langford also mentioned a group / web site she is involved with, and mentioned some videos they have.
